12.25" WATER BLADE

For Best Results:

- Thoroughly wash and rinse your vehicle before using this product, including any recessed areas, grooves and openings to wash away any foreign materials.
- Make sure that any dirt or abrasive material has been removed; these materials can cause damage to the vehicle while using the product.
- The handle should never come in contact with the vehicle, it can potentially cause damage. Only the blade should come in contact with the surface.
- Begin drying before water has dried to prevent spotting.
- Should not be used on a dry surface.
- Only moderate pressure is required to remove the water; the soft, silicone blade will mold to the shape of the vehicle. A small amount of additional pressure may be required for ridges, peaks or extreme contours.
- Begin drying from the top down to minimize dripping water. Finish drying process with a micro-fiber towel in grills, creases, etc.
